START SMALL
FINISH BIG

Wireless Lighting Control

“From *small* beginnings }
come *great* things.”

Start with a single room, then expand and elevate your home or luxury space. Whether wired or wireless, the Vantage system is designed for convenience, comfort, and security.

{ get started } ①

The dimmer is key to room ambiance, energy efficiency, and sustainable living.

Cooking in the kitchen is more enjoyable when lighting is tuned to match the task. Once you have experienced how wireless dimming enriches your life, you will never go back.

“The Vantage System has simplified our house.”

- John Elway -

② { limitless opportunities }

Single button presses set proper lighting scene levels effortlessly.

With programmable scene control multiple lighting loads in the same space can be fine-tuned for relaxing and enjoying an intimate evening at home. At the end of the day, relax knowing that a single button press can appropriately set lighting, shading, and climate for the night.

③ { intelligent }

Programmed via Design Center Software the InFusion controller is the gatekeeper for system communication and control.

Unwind with peace of mind. Exterior lighting provides security with timed outdoor scenes. Sensors detect when no one is present and turn lights off. Shading adjusts based on time of day or privacy needs all intelligently managed by the controller.

④ { flexible and convenient }

Use your own smartphones or tablets for mobile access and control.

Expand and modify your system at any time with wireless communications, local, and mobile control. With Vantage's proprietary software platform, a personalized InFusion system by Vantage is the most scalable system available today.

“A *unique* approach to “no new wire” lighting integration—*conceived* by you, *designed* by Vantage, *delivered and supported* by a professional team, and backed by a limited, *5 year warranty*.”
